An ASSA ABLOY Group brand

ASSA ABLOY

If you are...

A security devices dealer
An institutional locksmith
A security consultant
An in-house security technician

We have the key to your professional success

Mul-T-Lock®, a world leader in high security solutions for institutional, commercial, industrial and residential premises, brings you the ultimate in master key solutions:

► One master key

One master key opens all cylinders, while each individual cylinder is opened by a specific key. In other words, the security manager can open every lock with just one key, while each employee can only open one door (or several, according to clearance). Special software is used by Mul-T-Lock representatives to help plan the system and we provide you with software to manage it.

► One management system

On-line information and report generation based on a comprehensive database.

► Every option

Masterkey solutions are designed to apply to all types of Mul-T-Lock products in all types of premises. Moreover, should you prefer, you can choose a Mul-T-Lock pinning kit for building and maintaining your Mul-T-Lock Master key systems.

For strategic access points, opt for Interactive® CLIQ®, combining the best of electronic and mechanical technology to deliver double locking, encrypted, coded keys and time-based programming.

► Every support

Your Master key solutions are backed by the always available support of 20,000 service centers in nearly 100 countries. We can train you, cooperate with you, and even design the entire solution.

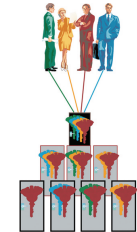

CHOOSE THE MASTER KEY FORMAT THAT'S MOST CONVENIENT FOR YOU

Our representatives help you implement the format that is the best for your business or organization. Using our MASTERpiece software, they deliver a turnkey solution for the format you prefer.

Hierarchical Format

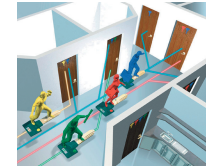

Just as its name implies, this is a top-down structure. You program several levels of key authorization, with the higher levels authorized to open lower levels.

Typically, the Grand Master key can open every cylinder in the system, while at the lowest levels, each key can open only a single lock.

Matrix Format

A matrix format is based on a matrix chart, in which each column represents a cylinder, and each row a key holder. You indicate the locks that each key holder is authorized to open.

When the pin is the point

Our pinning kit contains all the tools, plug pins, body pins, springs and master pins, to enable you to easily change the combination of an existing cylinder. Should you prefer, we will supply you with pre-assembled cylinders.

MultiManager records every point

The MultiManager database is built on MASTERpiece information to help keep track of who gets what. When a key is given to a user, the data is stored and a receipt printed out. The report-generating software gives a clear picture of key distribution, discards, loans and stock.
